EXPERIENCE

Full-Stack JavaScript Developer

Quasset

📅 Sept 2022 - Present   📍 Ayala Ave, Makati

- Spearheaded the development of an internal website for cross-departmental use, incorporating role-based authentication via Microsoft Entra ID and NextAuth.
- Authored and maintained 2,000+ unit tests using Jest, aligning with the team's C0/C1/C2 coverage standard.
- Wrote and executed SQL migration scripts, seamlessly handling 5GB of critical customer data to integrate new features and meet evolving requirements.
- Implemented real-time monitoring using Azure Application Insights, and Azure App Service's diagnostics logging by configuring error boundaries.
- Integrated apps with data measures using Google Tag Manager, Facebook Conversions API, Klaviyo, and KnoCommerce for the marketing team.
- Implemented security measures against replay attacks using Google reCAPTCHA's frictionless system with fallback to manual visual challenge if flagged as a potential bot.
- Optimizied loading of data by implementing server-side pagination.
- Created React components for complex forms using Headless UI, and React Hook Form. Used several schema validators such as Yup, Zod, and AJV.
- Built web apps with support for internationalized routing using Next.js, storing each language version on separate JSON files.
- Designed wireframes and user flows in Figma while establishing the project's component library.
- Assessed applications by conducting End-to-End Testing, Regression Testing, and Lighthouse Testing.
- Responsible for the iterative production deployment of applications using Docker and Azure Pipelines.
- Oversaw the entire data pipeline of reports depicting survival analysis, mutation overview of subscriptions, and campaign performance. Conducted data ingestion from several sources using Azure Data Factory. Wrangled data from Azure Storage, and parquet files. Utilized Azure Databricks and PySpark for data extraction. Finally, visualizations were then done using Power BI.
- Led weekly alignment stand-up with Netherlands-based stakeholders.
- Actively participated in project management by creating Work Breakdown Structures (WBS) and managing Azure Boards that implements Agile Scrum practices.
- Effectively communicated and presented programming technologies to developers of varying expertise levels from the Philippines and Netherlands.
- Documented back-end and database modules with sequence and use-case diagrams.

Web Development Intern

Taktyl Studios

📅 April 2012 - July 2022   📍 Fort Palm Spring, Taguig

- Migrated Laravel app to full-stack JavaScript solutions.
- Built responsive pages with semantic HTML, and minimal HTTP requests in mind.
- Designed RESTful APIs using Strapi with Amazon S3 integration.
- Developed architectural plans for the database schema with support for white labelling.
- Implemented a reservation module using Object-Oriented Programming, integrated with Nodemailer to send receipts of successful bookings.
