EXPERIENCE

Full-Stack JavaScript Developer
Quasset

📅 Sept 2022 - Present 📍 Ayala Ave, Makati

- Wrote and executed SQL migration scripts, seamlessly handling 5GB of critical customer data to integrate new features and meet evolving requirements.
- Spearheaded the development of an internal website for cross-departmental use, incorporating role-based authentication via Microsoft Entra ID and NextAuth.
- Authored and maintained 3,000+ unit tests using Jest, aligning with the team's C0/C1/C2 coverage standard.
- Implemented real-time monitoring using Azure Application Insights, and Azure App Service's diagnostics logging by configuring error boundaries.
- Integrated apps with data measures using Google Tag Manager, Facebook Conversions API, Klaviyo, and KnoCommerce for the marketing team.
- Implemented security measures against replay attacks using Google reCAPTCHA's frictionless system with fallback to manual visual challenge if flagged as a potential bot.
- Optimized loading of data by implementing server-side pagination.
- Created React components for complex forms using Headless UI, and React Hook Form. Used several schema validators such as Yup, Zod, and AJV.
- Built web apps with support for internationalized routing using Next.js, storing each language version on separate JSON files.
- Designed wireframes and user flows in Figma while establishing the project's component library.
- Assessed applications by conducting End-to-End Testing, Regression Testing, and Lighthouse Testing.
- Responsible for the iterative production deployment of applications using Docker and Azure Pipelines.
- Contributed to data analytics tasks using Azure Data Factory, Databricks, and Power BI — working with parquet files and Azure Storage to support insights on subscriptions and campaign performance.
- Led Sprint Plannings and Sprint Reviews with Netherlands-based stakeholders.
- Actively participated in project management by creating Work Breakdown Structures (WBS) and managing Azure Boards that implements Agile Scrum practices.
- Created technical designs for multiple projects in direct collaboration with the Chief Technical Officer (CTO).
- Effectively communicated and presented programming technologies to developers of varying expertise levels from the Philippines and Netherlands.
- Documented back-end and database modules with sequence and use-case diagrams.

Web Development Intern
Taktyl Studios

📅 April 2022 - July 2022 📍 Fort Palm Spring, Taguig

- Migrated Laravel app to full-stack JavaScript solutions.
- Built responsive pages with semantic HTML, and minimal HTTP requests in mind.
- Designed RESTful APIs using Strapi with Amazon S3 integration.
- Developed architectural plans for the database schema with support for white labelling.
- Implemented a reservation module using Object-Oriented Programming, integrated with Nodemailer to send receipts of successful bookings.
